The Pumpkin Life Cycle

Pumpkins start small, grow big, then make new seeds!

1 Seed

The life cycle begins with a pumpkin seed.

2 Sprout

A tiny sprout comes up through the soil.

3 Vine & Leaves

The plant grows long vines with big green leaves.

4 Flower

Yellow flowers bloom on the vines.

5 Tiny Pumpkin

After the flower, a tiny pumpkin begins to grow!

6 Big Pumpkin

The pumpkin grows bigger and bigger!

7 Seeds Inside

We harvest the pumpkin and save the seeds to plant again next year!

Fun Facts!

- Pumpkins are fruit, but we eat them like vegetables.
- Pumpkins come in many shapes, sizes, and colors!
- Pumpkins love sunshine, water, and good soil!

Remember!

The pumpkin life cycle is a circle. We save seeds and plant them again next year!
